

PRESS RELEASE

Northwave Extreme Tech Road Shoe

Northwave, the highly innovative Italian cycling company, introduces the new Extreme Tech road shoe for 2012. This new model is now using all new materials and technology from the breakthrough sole to the unique closure system.

The all new Ultralight Carbon sole which utilizes a new airflow system that ventilates the shoe. A new Speedplay specific adapter system that allows an even thinner stack height while allowing usage of all major pedal systems makes this the most adaptive high performance road shoe available.

Usage of an entirely seamless upper allows for a precise fit and no overlapping materials. Ventilation windows and perforations give the Extreme Tech its breathability and cooling. One of the new key features is the use of a new closure system- Speed Lace Winch (S.L.I.). This new cable system gives the shoe precise forefoot adjustment through a cable lace and a side button that is very intuitive and easy to use. The cable itself is made from research into the most durable sailing technology, giving the system unrivaled durability. The instep fit is controlled with the proven A.S.R. retention system, featuring the Step By Step buckle which allows micrometric opening and closing of the system.
